Academic Elective Bidding (AEB) — Scrum Project

Name: Shashank D

SRN: PES1UG24CS433

Project Key: AEB

Template Used: Scrum (Company-managed)

1. Epics and User Stories (List View)

The Academic Elective Bidding project was broken into three Epics — Course Catalog & Registrar Configuration, Student Credit Bidding & Preference Management, and Allocation Solver & Timetable Publishing — each expanded to show their child User Stories with assigned status.

The screenshot shows the Jira interface for the 'Academic Elective Bidding' project. The left sidebar contains navigation options like 'For you', 'Recent', 'Starred', 'Apps', 'Plans', 'Spaces', 'Dashboards', 'Teams', 'Goals', 'Projects', and 'Customise sidebar'. The main area displays a list view of work items. The table has columns for checkboxes, expand/collapse icons, epic names, assignees, reporters, priorities, statuses, resolutions, and creation dates. Three epics are listed: 'AEB-1 Course Catalog & Registrar Configuration', 'AEB-2 Student Credit Bidding & Preference M...', and 'AEB-3 Allocation Solver & Timetable Publishing'. Each epic has several nested user stories. The status of each item is indicated by a colored dot (green for 'Done', yellow for 'To Do', and red for 'Unresolved').

2. Backlog with Story Point Estimates

Story points were assigned to each User Story using the Fibonacci scale, reflecting relative complexity and effort. Total backlog estimate: 37 points across 9 stories.

Figure 2: Backlog view with Fibonacci story point estimates per story

3. Sprint 1 — Completed Board

Sprint 1 focused on foundational course configuration, prerequisite validation, and the student bidding interface. All planned stories were moved through To Do, In Progress, and Done.

Figure 3: Sprint 1 board — all planned stories completed (Done column)

4. Sprint 2 — Active Board

Sprint 2 carried forward the remaining backlog items, covering the allocation solver, timetable publishing, and course demand visibility features.

Figure 4: Sprint 2 board — active sprint with remaining stories in To Do

5. Sprint 2 — Completion

Sprint 2 was completed with all 4 planned issues marked Done, closing out the full backlog across both sprints.

Figure 5: Sprint 2 completion confirmation — all issues completed

6. Sprint Burndown Chart

The burndown chart tracks remaining story points against the ideal guideline burn rate across the sprint duration (30 August – 13 September 2026).

Figure 6: Sprint burndown chart (Story points, AEB Sprint 1)

7. Non-Functional Requirements & Sprint 3 Progress

In addition to the 5 functional User Stories, two Non-Functional Requirements were added to the backlog to capture performance and usability constraints: NFR1 (Allocation solver performance — results published within 5 minutes of the bidding deadline) and NFR2 (Real-time bidding interface validation feedback within 2 seconds). AEB Sprint 3 shows a realistic, partially-completed simulated sprint state, with 8 of 9 stories marked Done and 1 (AEB-12) left In Progress at time of reporting.

Figure 8: AEB Sprint 3 (8 of 9 Done, 1 In Progress) and Backlog showing NFR1 and NFR2

8. Bug Tracking

A sample bug work item was created and tracked separately from the Scrum backlog to demonstrate issue tracking within the same project space.
